

GREENWOOD TO ARAPAHOE TRANSMISSION PROJECT

SUMMER 2026

This map is a graphic and may not show exact locations.

Overview

As part of the Denver Metro Transmission Upgrades, we are upgrading approximately 9.5 miles of 230 kilovolt overhead electric transmission line in the City and County of Denver and the cities of Centennial, Englewood, Greenwood Village, Littleton and Sheridan. Work will occur between the existing substations:

- Greenwood Substation: South Holly Street and East Weaver Avenue in Centennial
- Arapahoe Substation: South Platte River Drive and West Harvard Gulch in Denver

Additional upgrades are being made to associated equipment at the substation.

The Greenwood to Arapahoe Transmission Project is part of a multi-year effort to rebuild and upgrade vital, higher voltage transmission infrastructure across the Denver Metro area as part of the Denver Metro Transmission Upgrades.

Schedule

Work is expected to begin in September 2026 with all project components in service by November 2027.

Schedules are subject to change.

GREENWOOD TO ARAPAHOE TRANSMISSION PROJECT

Construction

During work, you may notice:

- Traffic control
- Marking of utility lines and utility survey holes
- Road, sidewalk and trail closures
- Temporary changes to access for vehicles, pedestrians and cyclists
- Construction noise
- Equipment and material staging

We restore work areas to conditions required by permits as weather allows. Work areas may be left temporarily restored after construction until we can complete final restoration.

Safety overview

Public safety is at the foundation of all we do. We take a proactive approach by implementing safety measures before, during and after construction.

The project has been designed to meet federal and state standards and safety requirements for installing, maintaining and operating electric infrastructure.

Electric safety

Our electric system, including substations and power lines, are monitored by a 24/7/365 staffed control center. If there is an unanticipated event in the system, the flow of electricity into the system is shut off at a nearby substation to protect the public.

We inspect our infrastructure regularly to check for damage, equipment needing repair or replacement and anything else that might jeopardize safe, reliable operation of our equipment.

In the event of an electric infrastructure problem, clear the area immediately and contact Xcel Energy's emergency number: **800-895-1999**. Call **911** in an emergency.

Call before you dig

A common cause of utility line strikes results from improper or unauthorized digging near underground utilities. Prior to digging, call **811** or visit colorado811.org to have buried utility lines located and marked. This helps prevent dangerous conditions that result from damaging a buried line.

Be aware of scams

All Xcel Energy employees and most contractors who perform work for us carry company IDs. Ask to see a company ID if someone on your property claims to be working for Xcel Energy, regardless of the work being performed. If the person cannot show you an ID, ask them to leave and return only with proper identification.

Some contractors working on our behalf may not have Xcel Energy IDs. If you would like to verify that the contractor is authorized to work on our behalf, please call Customer Care at **800-895-4999** or visit xcelenergy.com/IdentifyingAuthorizedWorkers.
