

GREENWOOD TO ARAPAHOE TRANSMISSION PROJECT

WORK IN YOUR AREA

Construction starting soon

We are conducting construction activities along the existing 230 kilovolt overhead electric transmission line between the existing Greenwood Substation and the existing Arapahoe Substation in City and County of Denver and the cities of Centennial, Englewood, Greenwood Village, Littleton and Sheridan.

Work is expected to begin in September 2026 with all project components in service by November 2027.

Schedules are subject to change.

During work, you may notice:

- Traffic control
- Road, sidewalk and trail closures
- Construction noise
- Marking of utility lines and utility survey holes
- Temporary changes to access for vehicles, pedestrians and cyclists
- Equipment and material staging

We restore work areas to conditions required by permits as weather allows. Work areas may be left temporarily restored after construction until we can complete final restoration.

Overview

As part of the Denver Metro Transmission Upgrades, we are upgrading approximately 9.5 miles of 230 kilovolt overhead electric transmission line in Arapahoe County and Denver. Work will occur between the existing substations:

- Greenwood Substation: South Holly Street and East Weaver Avenue in Centennial
- Arapahoe Substation: South Platte River Drive and West Harvard Gulch in Denver

Additional upgrades are being made to associated equipment at the substation.

The Greenwood to Arapahoe Transmission Project is part of a multi-year effort to rebuild and upgrade vital, higher voltage transmission infrastructure across the Denver Metro area as part of the Denver Metro Transmission Upgrades.

Safety

Public safety is at the foundation of all we do. We take a proactive approach by implementing safety measures before, during and after construction. The project has been designed to meet federal and state standards and safety requirements for installing, maintaining and operating electric infrastructure.
